CS6380 Project 2 Individual Report

My Contribution

I was the primary architect of our solution, and I implemented a large portion of the code. I also helped delegate tasks to Shashank and Prashant so we could all work in parallel.

Prashant Prakash's Contribution

Prashant created the README and group report files. He also implemented the Courier class that we used to send messages with a random delay.

Shahshank Adidamu's Contribution

Shashank helped with the implementation of broadcasting distance updates to neighbors. He also helped create multiple inputs to test the solution. Each of these inputs also had corresponding expected results.

Group Contributions

We all met together for multiple hours to work on this as a group. We worked in each other's presence for the entirety of the project over two different days. Although we did write separate parts of the solution, we gave each other feedback and helped each other work through issues.
