CS6380 Project 2 Individual Report

Shashank Adidamu
sxa145730

Understanding the Algorithm and getting a feel of how the algorithm works in distributed environment was an important learning from the project. We all met together, discussed about the design and structure of the program and then implemented the code. I was involved in design discussion, and then helped the team with the implementation of broadcast distance updates to neighbors function. I also worked on creating test cases to test the solution.

Maxwell Hall's Contribution

Maxwell did major part of the coding and his knowledge and experience of programming principles helped us in creating hassle free code structure.

Prashant Prakash's Contribution

Prashant implemented the Courier class, which was used to send messages with a random delay. He also created the README and group report files.

Grades

Name	Grade
Prashanth Prakash	100
Maxwell Hall	100
